

## Présentation

The National Telecommunications Regulatory Agency (ANRT) was created to regulate the telecommunications sector, ensuring compliance with the rules of fair competition. Through its actions, such as market analysis, setting interconnection prices, prevention of anti-competitive practices, managing Universal Service projects, the Agency works to universalize access to telecommunications, to preserve the rights of users and to bridge the digital gaps.

To be closer to citizens, the ANRT has implemented this information section. The objective is to bring them closer to the world of telecommunications, which can appear sometimes too technical, and raise a wide number of questions..

The ANRT glossary provides a definition of the most common terms in communications telecommunications, that users may come across when browsing offers, in advertising or in the newspaper.

A Frequently asked questions section is also available to provide answers to commonly asked questions.
